

# FALCON 2000S

## OY-SWO

The Falcon 2000S is a wide-body, transcontinental business jet with a range that gives you all the space and connectivity you need for up to 7 hours flying time. Designed with a luxurious interior, this aircraft has the personification of comfort for travellers in mind.

The Falcon 2000S has the ability to land at slower, safer speeds, with nearly full fuel tanks. It handles short runways at high altitudes (even in warm weather) and flies farther from those airports. The Falcon 2000S uses less fuel than many midsize jets and produces a modest carbon footprint.

This efficiency is due largely to the innovative design of the low-drag wing.
